NOTE

- Annual energy consumption is based on 220 standard washing cycles for 🌀 COTTON course at 60 °C and 40 °C at full and partial load, and the consumption of off and left-on modes. Actual energy consumption will depend on how the appliance is used.
- Annual water consumption is based on 220 standard washing cycles for 🌀 COTTON course at 60 °C and 40 °C at full and partial load. Actual water consumption will depend on how the appliance is used.
- Spin extraction is very important when you use a clothes dryer to dry your clothes. The energy for drying costs much higher than the energy for washing. Washing with the high spin saves more energy in drying your clothes in a clothes dryer.
- The 🌀 COTTON 60 °C and 🌀 COTTON 40 °C course are the 'standard cotton 60 °C program' and the 'standard cotton 40 °C program'. They are suitable to clean normally soiled cotton laundry and they are the most efficient (concerning water and energy consumption) for this type of laundry. Please run Calibration Mode after the installation. In these programs the actual water temperature may differ from the declared temperature.
